ABOUT

As a 3rd-year Computer Engineering student at Haliç University, I specialize in building end-to-end machine learning solutions with a focus on tabular data analysis and predictive modeling. I have hands-on experience with Python, SQL, and core ML libraries including Scikit-learn, developing models for classification and recommendation systems. I approach projects systematically, writing clean and modular code with experience spanning the full ML lifecycle from data cleaning and feature engineering to model evaluation and deployment.

EDUCATION

Computer Engineering
Haliç University
Bachelor's Degree
2023 - Present

EXPERIENCE

AI Engineer Intern
BLUESENSE
September-October 2025

Worked on data cleaning and optimization for tabular datasets, developed and improved recommendation system models for the SmartBeauty mobile application. Gained hands-on experience with feature engineering and model evaluation on real production data.

IT Intern
Social Office
September-October 2025

Within the Social Office's Intern program, I developed projects and learnt the topics as such:

- AutoCAD techniques for technical design and drafting
- Applied Excel for data analysis and business applications
- Applied Photoshop for digital design and image processing
- Applied Python programming and development

Data & AI Intern
TECHBROS
July-August 2025

Participant in TechBros InternCamp2025, a comprehensive month-long training program covering enterprise systems, data analytics, and emerging technologies and such.

Training Areas:

- ERP and CRM systems architecture and integration
- DevOps methodologies and deployment pipelines
- Business Intelligence and Data Analytics fundamentals
- Data Warehousing and ETL processes
- Data visualization and statistical analysis techniques
- SQL and NoSQL database management
- Generative AI applications and implementation strategies
- Machine Learning integration in enterprise environments
- Hands-on workshops and technical presentations

VOLUNTARY

Project Team Lead
Google Developer Groups on Campus Haliç
September 2025 - Present

As the Project Team Lead at Google Developer Groups on Haliç, a thriving developer oriented community, I am mostly involved in the technical matters of the club and overseeing the projects that are developed within the team. As the team, some of the work that we have organized are:

- Midterm Workshops, consisting of Python, Data Structures and OOP workshops
- Haliç Engineering Summit'25

Initiate Member
Developer MultiGroup
February 2026 - Present

Developer MultiGroup is a vibrant non-profit software community dedicated to fostering growth, collaboration, and innovation among technology enthusiasts.

As the member of the Data Team, I contribute to the various projects and courses that are organized within the community.

Campus Ambassador
Campus Arc
February 2026 - Present

Campus Arc is an all-in-one platform revolutionizing how students build their careers in college by connecting students, communities, companies, and educators across the globe. Backed by ODTÜ Teknokent, Open Campus, and EDU Chain.

As a Campus Ambassador for Campus Arc, I represent the platform at Haliç University, driving student engagement and fostering connections between students, student communities, educators and businesses.

SKILLS

Programming & Data

- Python: OOP, Pandas, NumPy, Data Cleaning & Validation
- SQL: PostgreSQL, MySQL, Query Optimization, Database Design
- Git, Linux Command Line

Machine Learning

- Scikit-learn, XGBoost, LightGBM
- Feature Engineering, Cross-Validation, Hyperparameter Tuning
- Classification, Regression, Propensity Modeling

Data & Analytics

- Data Processing & ETL Pipelines
- Tableau, Power BI, Excel
- Statistical Analysis, A/B Testing

Cloud Technologies

- Google Cloud, Huawei Cloud

Tools & Environment

- Jupyter Notebook, VS Code, PyCharm
- Docker, API Development (FastAPI)
